Security Advisory

Critical vulnerabilities in SICK DL100-2xxxxxxx

Document ID:	sca-2025-0004
Publication Date:	2025-03-14
CVE Identifiers:	CVE-2025-27593, CVE-2025-27594, CVE-2025-27595
Version:	1

Summary

Critical vulnerabilities have been found in the SICK device DL100-2xxxxxxx. If exploited, this potentially allows an attacker to impact availabiltiy, integrity and confidentaility of the products. Currently, SICK is not aware of any public exploits specifically targeting these vulnerabilities. As a mitigation, SICK strongly recommends operating the system within a secure infrastructure to minimize risk.

List of Products

Product	Affected by
SICK DL100-2xxxxxxx all firmware versions	CVE-2025-27593 Status: Known Affected Remediation: Workaround
	CVE-2025-27594 Status: Known Affected Remediation: Workaround
	CVE-2025-27595 Status: Known Affected Remediation: Workaround

Vulnerability Overview

CVE-2025-27593 Download of Code Without Integrity Check

Summary: The product can be used to distribute malicious code using SDD Device Drivers due to missing download verification checks, leading to code execution on target systems.

CVE-2025-27593 has been assigned to this vulnerability.
CVSSv3.1 base score: 9.3
CVSSv3.1 vector string: CVSS:3.1/AV:N/AC:L/PR:N/UI:R/S:C/C:H/I:H/A:N
CWE identifier: CWE-494 (Download of Code Without Integrity Check)

CVE-2025-27594 Cleartext Transmission of Sensitive Information

Summary: The device uses an unencrypted, proprietary protocol for communication. Through this protocol, configuration data is transmitted and device authentication is performed. An attacker can thereby intercept the authentication hash and use it to log into the device using a pass-the-hash attack.

CVE-2025-27594 has been assigned to this vulnerability.
CVSSv3.1 base score: 7.5
CVSSv3.1 vector string: CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:N/A:N
CWE identifier: CWE-319 (Cleartext Transmission of Sensitive Information)

CVE-2025-27595 Use of Weak Hash

Summary: The device uses a weak hashing alghorithm to create the password hash. Hence, a matching password can be easily calculated by an attacker. This impacts the security and the integrity of the device.

CVE-2025-27595 has been assigned to this vulnerability.
CVSSv3.1 base score: 9.8
CVSSv3.1 vector string: CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:H/A:H
CWE identifier: CWE-328 (Use of Weak Hash)

Remediations

Workaround for CVE-2025-27593

Details: Please make sure that you apply general security practices when operating the products. The following General Security Practices and Operating Guidelines could mitigate the associated security risk.

Valid for:

- SICK DL100-2xxxxxxx all firmware versions

Workaround for CVE-2025-27594

Details: Please make sure that you apply general security practices when operating the products. The following General Security Practices and Operating Guidelines could mitigate the associated security risk.

Valid for:

- SICK DL100-2xxxxxxx all firmware versions

Workaround for CVE-2025-27595

Details: Please make sure that you apply general security practices when operating the products. The following General Security Practices and Operating Guidelines could mitigate the associated security risk.

Valid for:

- SICK DL100-2xxxxxxx all firmware versions

General Security Practices

General Security Measures

As general security measures, SICK recommends to minimize network exposure of the devices, restrict network access and follow recommended security practices in order to run the devices in a protected IT environment.

Vulnerability Classification

SICK performs vulnerability classification by using the CVSS scoring system (*CVSS v3.1*). The environmental score is dependent on the customer's environment and can affect the overall CVSS score. SICK recommends that customers individually evaluate the environmental score to achieve final scoring.
