- ② optical axis, receiver
- ③ optical axis, sender

## Pinouts, see table Technical data: Connection type/pinouts

M12 male connector, 4-pin, A-coding

## display and adjustment elements

- ① LED yellow
- ② LED green
- ③ Teach-in button

## Concept of operation

### 1. Position mark

Press and hold teach-in  
button  $> 1 < 3$  s.  
Yellow LED flashes slowly.

### 2. Position background

Press and hold teach-in  
button  $< 3$  s.  
Yellow LED goes out.

## Concept of operation Teach-in dynamic

### 1. Position background

Press the teach-in button and keep it pressed. LED flashing slowly.

### 2. Move at least the mark and background using the light spot.

Keep the teach-in button  $> 3 < 30$  s pressed.

Release the teach-in button.

Yellow LED will illuminate, when emitted light is on the mark.

### Example

### Switching characteristics

The optimum emitted light is selected automatically (at RGB variants).

Static teach-in: light/dark setting is defined using teach-in sequence.

Dynamic teach-in: switching output active on mark, if background is longer in the field of view during the teach-in.

The switching threshold is set in the center between the background and the mark.

If the button is pressed again within 10 s of the teach ( $> 20$  ms  $< 10$  s), the switching threshold is placed 25 % below the mark (dotted line in Figure).

Teach-in can also be performed using an external control signal (only dynamic teach-in).

Keylock activation and deactivation: hold down teach-in button  $> 30$  s.

Teach-in failure: yellow LED indicator and the transmitted light of the sensor flashing quickly.

For dynamic teach-in with ET signal (5 Hz) via switching output Q.
