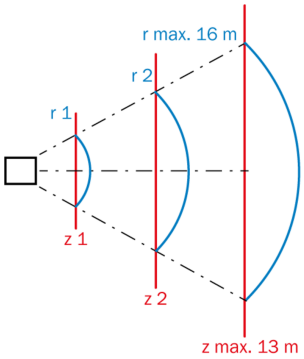
Field of view Absolute measurement accuracy and repeatabilityworking distance: radial



The specified numerical values are typical values and apply in the central 80% of the detection area, at room temperature, without ambient light, and at a frame rate of 25 fps.
At distances > 9 m, the reliability of the measured values will be lower and individual pixels or pixel groups may exhibit erroneous measured values.
The measurement accuracy may degrade by up to ±10 mm (typically ±5 mm) over the entire ambient operating temperature.
