Instruction for installation Minimum distance between 2 light grids

If not installed in opposition, make sure the minimum distance between the two light grid pairs is adhered to
 ① Minimum distance (safe)
 ② Minimum distance (typical)

Instruction for installation Minimum distance to reflective materials

Depending on the sensing range, make sure that there are no reflective objects in the field of view of the light grid pair

- ① Minimum distance (safe)
- ② Minimum distance (typical)

Instruction for installation Slim & Flat

- ① Slim model = light emission on narrow side
- ② Flat model = light emission on broad side

Detection capability Minimum detectable object (MDO)

d_{LG} = Installed working distance between sender and receiver
 d = Distance to sender or receiver related to the installed working distance

Functional principle Optical synchronization

The sender and receiver synchronize with each other optically, so no electrical connection is necessary. For this reason, either the first or the last beam of the automation light grid must remain clear. If both beams are interrupted, no measurements can be taken.

- ① Optical synchronization
- ② Beam separation
- ③ scanning range
