#### KTS/KTX Prime - setting the switching threshold (2-point teach-in)

Suitable for manual positioning of the object to be detected, e.g. marks and background.

#### 1. Position mark

When setting the contrasts to be detected, "1st" flashes.
Press set button.

#### 2. Position background

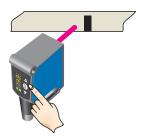

When setting the contrasts to be detected, "2nd" flashes. Press set button. The Quality of Teach is displayed.

#### KTS/KTX Prime - Setting the switching threshold (teach-in dynamic)

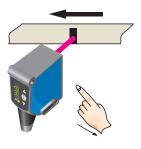

Suitable for teaching in moving objects.

#### 1. Position background

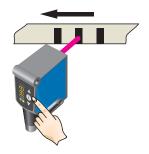

#### 2. Move at least the mark and background using the light spot

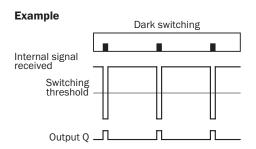

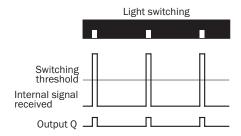

The display lights up during repeat length detection ( - - - ).

Press the Set pushbutton to end the teach-in process. The Quality of Teach is displayed.

#### **Switching characteristics**

The optimum emitted light is selected automatically (at RGB variants).

Static teach-in: light/dark setting is defined using teach-in sequence.

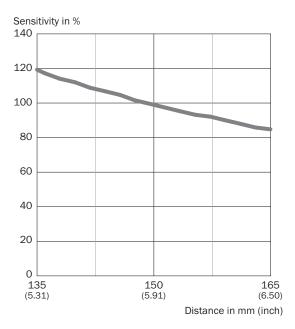

Dynamic teach-in: switching output active on mark, if background is longer in the field of view during the teach-in.

The switching threshold is set in the center between the background and the mark.

Keylock (activation and deactivation): Press and hold the "+" pushbutton > 10 s.

The Q-LED (yellow) flashes and the "Err" error message appears on the display.
