FLOWSIC100
Volume Flow Measuring Device

Gas Flow Measurement for Continuous Emission Monitoring
FLOWSIC100 – The reliable and precise flow measurement with the highest durability

FIELDS OF APPLICATION

• Power generation (e.g. power plants)
• Processing industries (cement manufacturing, steel and iron production)
• Waste disposal industry (e.g. waste incineration plants)
• Chemical industry
• Petrochemical plants and refineries
• Pulp, paper and textile industry
• Ventilation and heating plants

FLOWSIC100 H

• High power version for large stacks up to 13 m diameters
• Certified according to 2001/80/EC, 2000/76/EC, 27th BImSchV1), TA air, MCERTS and GOST
• Suitable for high dust application

FLOWSIC100 M

• Medium power version – best suitable for stack diameters up to 3.4 m
• Certified according to 2001/80/EC, 2000/76/EC, 27th BImSchV1), TA air, MCERTS and GOST

FLOWSIC100 PR

• For stack diameters greater than 0.4 m
• Certified according to 2001/80/EC, 2000/76/EC, 27th BImSchV1), TA air, MCERTS and GOST
• Probe type with two transducers for the installation from one side only

AT A GLANCE

• Rugged titanium transducers (standard) for higher durability, also in wet gas conditions
• Corrosion resistant probe materials for use with aggressive gases
• No purge air required
• Standard system can be used for gas temperatures up to 260 °C; with the innovative internal cooling up to 450 °C max. 2)
• Various probe lengths to meet a wide range of application conditions
• Integral measurement over the entire stack diameter3) for representative measuring results
• No moving parts means low maintenance
• Fully automatic zero and span check

1) Federal Immission Control Ordinance

2) Temperature specifications for the specific types see tech. data, page 4

3) Except for the probe type
PRODUCT DESCRIPTION

The FLOWSIC100 standard version contains two FLSE100 sender/receiver units, a MCU control unit and a connection box. The MCU is used for input and output of signals, for calculation of volume flow to reference conditions (standardization) as well as for user friendly LCD interface.

Installation of the sender/receiver units

- Cross-stack installation: 2 sender/receiver units are mounted on both sides of a stack at a specific angle $\alpha$ to the gas flow direction.
- One-side installation: Only a single sender/receiver unit (probe type) is mounted at a specific angle $\alpha$ to the gas flow. Both ultrasonic transducers are installed on the probe with a fixed measuring path.

Optional components

- MCU control unit with integrated blower unit (for internal cooled types only)
- Interconnection of an additional measuring path (2 path measurement) or dust measurements in one control unit possible

INNOVATIVE INTERNAL COOLING (AC-TYPES)

The internal cooled types FLOWSIC100 M-AC and H-AC operate at gas temperatures up to 450 °C. The necessary cooling of the transducers is realized by using an integrated air cooling supply. The cooling is made internally in the ultrasonic transducer. Cooling air does not contact the measured medium.
## Technical data

<table>

<th>Inner stack diameter</th>
<th>0.15 ... 3.4 m</th>
<th>&gt;0.4 m</th>
<th>1.4 ... 10 m</th>
<th>0.15 ... 3.4 m</th>
</tr>
</thead>
</table>

### Measurement conditions

- Meas. gas temperature: –40 ... +260 °C
- Max. inner duct pressure: ± 100 hPa

### Ambient conditions

- Ambient temperature: –40 ... +60 °C
- For MCU-P control unit with running blower: –40 ... +450 °C

### Approval

- Conformities: 2001/80/EC, 2000/76/EC, 27th BImSchV, TA air, MCERTS, GOST
- Protection class: • IP65
- • IP54 for MCU-P control unit with integrated blower unit
- Electrical safety: CE

### Inputs, outputs, controls via MCU control unit

<table>
