FLOWCIC600 DRU
ULTRASONIC GAS FLOW METER FOR UPSTREAM APPLICATIONS

Gas flow meters
UPSTREAM MEETS ULTRASONIC – REACHING A NEW MILESTONE IN RANGEABILITY & REDUCED MAINTENANCE COSTS

Ultrasonic meters provide several advantages over differential pressure meters such as improved rangeability, a higher turndown, no calibration and valuable diagnostics. The FLOWSIC600 DRU, an innovative dual-path ultrasonic meter is tailor-made for upstream and gathering applications. Specially adapted sensors and path layout combines the benefits of a FLOWSIC600 with an unmatched reliability and robustness for upstream conditions. The integrated 10D upstream piping allows for high measurement accuracy even without high-pressure calibration, resulting in faster ROI due to the lower operational costs of a virtually maintenance-free meter.

FLOWSIC600 DRU – improved quality in upstream gas metering.

Advanced diagnostics give you an advantage
The FLOWSIC600 DRU introduces a new diagnostic feature for the detection of liquids in the gas stream. Indication is typically provided when the gas volume fraction falls below 99.5%. This feature can provide valuable information about the measurement quality and the performance of upstream components such as liquid separators. Additional diagnostic information can be monitored, which gives the user information about how the meter and the meter run is performing. The additional parameters for each path are: the speed of sound, turbulence, the automatic gain control value, the signal validity parameter and analysis of the actual raw signal wave forms.

- The FLOWSIC600 DRU provides "real-time" monitoring of all diagnostic parameters, informs about the measurement conditions and generates a warning when parameters change significantly.
- Special design features ensure the FLOWSIC600 DRU is rugged even in wet gas conditions.
- Due to the decreased necessity for on-site checks and cleanings, your operating expenses stay low.
Rangeability and turndown
With a turndown ratio of up to 150:1 it covers flow ranges that usually require several differential pressure meters in different sizes. Diagnostics monitor the meter and process conditions, so that even large variations in flow and gas quality will not affect the measurement availability, which gives you peace of mind for natural gas production and gathering environments. By verifiable savings in CapEx and OpEx and less effort for maintenance, FLOWSIC600 DRU is an ideal alternative to differential pressure meters.

Virtually maintenance-free with self diagnostics
Ultrasonic technology is free of moving parts and has no wear and tear. Equipped with the MEPAFLOW CBM firmware and software, FLOWSIC600 DRU monitors itself and processes changes using “real-time” monitoring of all diagnostic meter parameters. The innovative liquid loading detection feature provides indication of liquids inside the gas stream and allows you to optimize the process and plan maintenance of the FLOWSIC600 DRU and other devices accordingly.

High accuracy without high-pressure calibration
The integrated 10D inlet, superior manufacturing precision, extremely tight tolerances for each meter during the manufacturing process, and high quality components all enable the SICK FLOWSIC600 DRU to ensure a ± 1% uncertainty without calibration. By eliminating the need for calibration, this feature alone can save start-up time and cost.

Long term stability
The FLOWSIC600 DRU keeps your costs low with long maintenance-free operating periods and high availability even in wet gas conditions. A high turndown ratio ensures reliable readings even with large variations in flow. Finally, the direct path layout is insensitive against pipeline fouling and further reduces maintenance effort, which underlines the long-term economic advantages of FLOWSIC600 DRU.

Highly durable
The FLOWSIC600 DRU is designed for use in harsh upstream environments. High durability is made possible by hermetically sealed transducers made of titanium with special wet gas encapsulation, and a meter body that ensures that liquids and contaminants will not affect the transducer performance. Also, the integral meter design with sealed transducer cover and internal cable routing prevent harsh ambient conditions from harming the device. This gives you the certainty of meter longevity even in challenging conditions.

Profit from technology leadership in ultrasonic gas metering
SICK is the technology leader in ultrasonic gas measurement. We have more than 30 years experience in ultrasonic measurement technology and more than 10 years of field experience with FLOWSIC600 in various applications. This knowledge has now been transferred into FLOWSIC600 DRU in order to provide a suitable solution even for upstream measurements. Our customers rely on us when it comes to challenging applications – with FLOWSIC600 DRU they can do that in upstream, potentially wet-gas applications as well.

Note: Below 3 ft/s increased uncertainty
STEPS TO ACCURACY: 1 % UNCERTAINTY WITHOUT HIGH-PRESSURE CALIBRATION

In combination with SICK’s leading ultrasonic transducer technology, continuous manufacturing process improvements, and our certified in-house calibration lab SICK offers a high level of production quality unmatched by anyone. Because of this, our manufacturing process for the FLOWSIC600 DRU results in a ±1% uncertainty out-of-the-box performance without the need for high-pressure calibration.

During manufacturing of the FLOWSIC600 DRU there are five essential steps that are worth taking a closer look at:

Manufacturing precision

Superior transducer technology

Zero flow verification test

It starts with the meter body. Superior manufacturing precision and narrow tolerance limits ensure the utmost accuracy of geometric parameters of the meter body and its integrated 10D inlet piping. Long-term collaborations with our regional suppliers allow a thorough quality assurance level for all the high-quality components of the FLOWSIC600 DRU.

High-quality transducers are the heart of our intelligent measurement devices. All transducers are made of titanium, are hermetically sealed without a matching layer and wet gas protected. SICK transducers are subject to precise geometrical dimensional and impedance checks before they are matched pairwise to provide the utmost accuracy on each ultrasonic path for superior performance.

After assembly of the meter, a zero flow verification test is performed to verify proper transit-time measurement. Zero flow stability dominantly affects a meter’s low-flow performance. The acceptance criteria for FLOWSIC600 zero flow verification exceeds the requirements from AGA9, and therefore ensures good low-flow performance.

Path length spread of FLOWSIC600 DRU

High-quality ultrasonic transducers

Example for zero flow verification test results with narrow acceptance criteria
Each FLOWSIC600 DRU is subject to a 7-point ambient air low pressure calibration. Calibration is done on SICK’s in-house test benches, which are certified and traceable by Germany’s national metrology institute, PTB. Quality acceptance criteria for the resulting meter characteristics ultimately ensure proper meter performance. Based on the calibration result and thorough statistical methods, each meter is individually corrected by calibration factors (based on flow-weighted mean error calculation).

Extensive testing was conducted during the development process of FLOWSIC600 DRU in order to create a good and repeatable correlation between low-pressure and high-pressure meter performance. To ensure the proper performance of each FLOWSIC600 DRU under high-pressure conditions in series production, permanent quality assurance measures have been installed. Population samples are periodically sent to certified high-pressure calibration labs to verify statistical treatment is relevant to the population. This increases the population database and ultimately decreases measurement uncertainty.
ULTRASONIC GAS FLOW METER FOR UPSTREAM APPLICATIONS

Product description
The FLOWSIC600 DRU is an innovative ultrasonic dual-path gas meter for upstream applications based on the FLOWSIC600. The meter includes a 10D inlet piping. With a turndown ratio of up to 150:1, it covers common flow ranges that usually require several orifice plates. Due to its special design, the FLOWSIC600 DRU provides low measurement uncertainty without need for a high-pressure flow calibration.

At a glance
- 3 inch and 4 inch dual-path ultrasonic meter with integrated 10D inlet piping
- High quality components with superior manufacturing precision
- High turndown ratio covering typical flow ranges of multiple orifice meters
- Accurate to ± 1 % without a high-pressure flow calibration

Your benefits
- Low initial CapEx – FLOWSIC600 DRU is accurate without need for expensive flow calibration
- Low subsequent CapEx by high turndown – FLOWSIC600 DRU can cover typical measurement ranges of multiple orifice meters (no need for station resize or replacement of orifice plates)
- Low OpEx by long maintenance-free operating period with stable accuracy - even in wet gas applications
- Low OpEx by a high turndown – no need for plate replacement, and only clean when the need is indicated by the diagnostics

Subject to change without notice
Fields of application

- Upstream natural gas metering in production and gathering
- Multi-Well production pad meters
- Shale gas production
- Natural gas transfer with possible wet gas content
- Check metering
- Allocation metering
- Replacement of orifice meter installations

Detailed technical data

The exact device specifications and performance data of the product may deviate from the information provided here, and depend on the application in which the product is being used and the relevant customer specifications.

SERVICES FOR MACHINES AND SYSTEMS: SICK LifeTime Services

Our comprehensive and versatile LifeTime Services are the perfect addition to the comprehensive range of products from SICK. The services range from product-independent consulting to traditional product services.
SICK AT A GLANCE

SICK is a leading manufacturer of intelligent sensors and sensor solutions for industrial applications. With more than 8,000 employees and over 50 subsidiaries and equity investments as well as numerous representative offices worldwide, we are always close to our customers. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in various industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services round out our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

For us, that is “Sensor Intelligence.”
