¹⁾ For more detailed information on the exact configuration of your machine/unit, please consult your relevant SICK branch office.

²⁾ At 60 °C ambient temperature.

³⁾ The safety-related accuracy specifies the maximum position error limit with which the safety functions can be supported. This results from the safety-related resolution: ($360^\circ / 13 \text{ bit} = 0.045^\circ$). The accuracy to be used for project planning results from the maximum difference between Safe Position 1 and Safe Position 2. Thus the following relationship exists (safety-related accuracy = number of increments difference between Safe Position 1 and Safe Position 2 * 0.045).
